SKILLS

Front-End:

HTML, CSS, JavaScript, React,
Tailwind, Bootstrap

Back-End:

C#, SQL, REST APIs, Cosmos
DB

Tools & Technologies:

Git, GitHub, Visual Studio,
Visual Studio Code, Insomnia,
Swagger, Matter.js, Azure
(Functions, DevOps, etc.),
Figma.

LANGUAGES

- English (Fluent)
- Swedish (Fluent)

PROFILE

Curious and driven fullstack developer with a background in .NET and a lifelong passion for games and technology. My interest in programming began with a desire to create games, which led me to study fullstack .NET development at Chas Academy in Stockholm. There, I developed a strong foundation in both front-end and back-end development through hands-on projects and real-world collaboration. Now, I'm ready to bring my skills into a game-oriented or tech-driven environment where I can keep learning and building meaningful software.

WORK EXPERIENCE

Active Solution

2024 - 2025

Stockholm - LIA (Internship)

As part of a small team consisting of just me and another intern, I helped design and develop a Pong-inspired game from the ground up. Built specifically for trade fairs and events, the game runs entirely in the web browser and lets players control paddles using Nintendo Joy-Cons via WebHID, transforming the classic game into something new and engaging. We handled everything from concept and design to development and testing, iterating regularly to fine-tune the game for live play.

EDUCATION

Chas Academy

2023 - 2025

Stockholm - Fullstack .NET

Comprehensive education focused on fullstack development using C# and the .NET platform. Frontend training included HTML, CSS, JavaScript, and modern frameworks like React. Backend education emphasized RESTful APIs, databases (SQL and NoSQL), and Azure-based cloud solutions. The program also stressed agile methodologies, team-based projects, and real-world problem solving.
